## benzene - Wikipedia

November 25th, 2018 - benzene  $C_6H_6$  is a simple aromatic hydrocarbon consisting of six carbon atoms joined in a ring, with one hydrogen atom attached to each carbon atom. It is a colorless, odorless liquid at room temperature. The benzene ring is a hexagonal ring of six carbon atoms, each bonded to one hydrogen atom. The carbon-carbon bonds in benzene are of equal length, and the carbon-hydrogen bonds are also of equal length. The benzene ring is a planar molecule, and the hydrogen atoms are also in the same plane as the carbon atoms. The benzene ring is a very stable molecule, and it is the most common form of carbon in nature. It is used in a wide variety of chemical and industrial processes.
